INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$50.00 fee to U.S. Dept. of Agriculture, Consumer and Marketing Service, Grain Division, Hyattsville, Maryland 20782. Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

5 Insert the date the applicant determined that he had a new variety.

12a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.

12b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.

12c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.

12d Provide complete data indicative of novelty. Seed and plant specimens may be submitted and seeds submitted may be sterile. Where possible, include photographs of plant comparisons, chemical tests, etc.

12e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

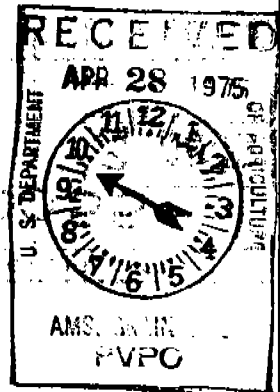

EXHIBIT A.

Origin and Breeding History of the Variety Diplomat.

1. Diplomat perennial ryegrass is a 26-clone synthetic variety.

No. of Clones	Germplasm source of parental clones	Progeny type	Remarks
17	Pennfine perennial ryegrass (Maternal parent)	polycross	Turf-type perennial ryegrass released from Penn State University. (All clones appear to have a paternal parent other than Pennfine).
5	NJE K-79 (Maternal parent)	polycross	NJE K-79 is a germplasm source derived from 80 turf-type ryegrass clones.
1	L4H x NJE K-79	single cross	L4H selected from old turf in Baltimore, Maryland.
1	L4K (Maternal parent)	polycross	L4K selected from a different old turf in Baltimore, Md.
1	Clone 70 (Maternal parent)	open pollinated	Clone 70 selected in Central Park, New York City.
1	NJE K-22 (Maternal parent)	open pollinated	NJE K-22 is a germplasm source derived from the same 80 clones as K-79.

The 26 clones were chosen on the basis of clonal performance and were evaluated in polycross progeny trials.

- Clonal propagules of the 26 parental clones were established in a randomized, replicated, isolated crossing block for the production of Syn I seed. Breeders seed is produced in an isolated spaced-plant nursery from the progeny of Syn I seed. Foundation increase fields must be established from Breeders seed. Certified production fields must be established from Breeders or Foundation seed.
- No objectionable off-type plants or variants have been observed in the reproduction and multiplication of this variety.
- Syn I and Syn II seed has produced turf of comparable quality and acceptable uniformity.

EXHIBIT B

Botanical Description of the Variety

'Diplomat' perennial ryegrass is a moderately dark green, fine-textured, turf-type variety. Rating at New Brunswick, New Jersey indicate that Diplomat is intermediate between 'Manhattan' and 'Pennfine' in darkness of color.² Diplomat has produced turf of excellent quality with summer performance ratings being significantly higher than those given Manhattan perennial ryegrass.¹ Diplomat has shown moderate resistance to the late fall and winter brown blight disease caused by Helminthosporium siccans Drechsler.² Turf produced by Diplomat showed a significantly finer texture and greater density than turf produced by Manhattan.² Resistance to Rhizoctonia brown patch is superior to that observed in Manhattan and comparable to that exhibited by Pennfine and Citation.² Diplomat is intermediate in maturity between Pennfine and Manhattan.³ It produces no fluorescent seedlings. Diplomat has maintained a more leafy turf during late May and early June than varieties such as Pennfine and Citation. Mowing quality of Diplomat has appeared to be comparable to that observed in Pennfine and Manhattan. Winterhardiness observations made in spaced-plant nurseries at Adelphia, New Jersey indicate that Diplomat has good winterhardiness, perhaps being equal to Manhattan in this respect and significantly more winter hardy than Pennfine.

Data Indicative of Novelty

Novelty is based on the unique combination of the following characteristics;

'Diplomat' must closely resembles 'Manhattan' except it has shown (1) an earlier date of anthesis (2) greater resistance to the Rhizoctonia brown patch disease (3) a better record of summer performance, and (4) has produced a turf of greater density and finer texture.
